

VMB Development, Inc.

(A Nonprofit Creating The Building Blocks For **Children**
To Help Their Visual, Mind & Behavior Development)

Did you know that vision is more than being able to see 20/20? Vision is the eyes, brain & body working together to process information. Also, the ability to see is not an action of the eyes alone. When both sides of the brain, the body and both ears and eyes are NOT working together, one can struggle with various physical activities, neurological functioning and learning difficulties.

More than 25% of children are diagnosed with a learning disability, behavioral issue or developmental delay. The diagnosis given sometimes is actually a hidden vision imbalance that affects their ability to learn with the inability to track, focus and have visual coordination. More and more children have the inability to use both eyes together. One may have 20/20 eyesight but not have the visual skills to track, focus and/or good hand/eye coordination. These inabilities one may have or struggle with are not detected by the 20/20 screening.

VMB Development, Inc., Nonprofit 501(c)(3), provides one-on-one training exercises to redevelop, build & strengthen neurological connections to develop better integration between the mind, eyes & body to connect & enable them to work together more effectively. **Some improvements from training are:**

A Child's Ability, Motivation & Willingness To Think, Learn & Follow Directions & Instructions

Anger & Anxiety Less Often	Attention	Attitude
Balance	Behavior	Chores Completed
Complaining Less	Communication Skills	Concentration
Daily Living	Emotional Outbursts Less & Shorter	Focus
Hand/Eye Coordination	Hand Writing Ability And Willingness	Hyperactivity Less
Memory	Mood Swings Less/Shorter	Motor Skills
Multi Tasking Ability	Organization	Participation
Patience	Person To Person Interaction	Physical Activity
Reading & Comprehension Skills	Receiving/Processing Sounds	School Grades
Self-Confidence/Self-Esteem	Senses Strengthened	Sleep Ability
Speech	Stress Reduction	(Falls Asleep Faster & More Sound)
(Sounding Out Letters & Words)	Temper	Visual Coordination
Visual Processing	Visual Tracking	Whines Less Often
